Sanofi Recruiting Team
Waltham, MA

Software Developer Intern - Summer 2027

Sanofi Team,

As a master's student in Computer Science specializing in Data-Centric Computing at Boston University, I am excited to apply for the Software Developer Intern position for Summer 2027 at Sanofi. I bring a strong academic foundation in mathematics and computer science, a bachelor's degree, and professional experience as both a mathematics teacher and a software developer. These experiences have strengthened my analytical thinking, problem-solving, communication, and collaboration skills, which I am eager to contribute to Sanofi's engineering teams.

Through my academic studies and professional experience, I have developed proficiency in Python, JavaScript, SQL and React along with a strong foundation in object-oriented programming, algorithms, databases, and software development. My graduate studies at Boston University are deepening my knowledge of algorithms, data science, machine learning, databases, and artificial intelligence. I am eager to apply this foundation to challenging engineering problems while continuing to learn and grow as a software engineer.

My background in mathematics, computer science, and software development, combined with my graduate studies, allows me to bring a thoughtful, analytical perspective to Sanofi's engineering teams. I am organized, dependable, and comfortable working both independently and collaboratively. I am eager to apply my technical skills to meaningful projects while continuing to grow as a software engineer.

Thank you for your time and consideration. I would welcome the opportunity to discuss how my background and skills could contribute to Sanofi.

Sincerely,
Vera Mezhvynskiy
